

Simple pawns to print and assemble

These free pawns are easy to build for your board games. Print and build as many as you like on some strong paper. Easy to use, you can fold them to put them away flat into a box and then unfold them again to play.

1. print
2. cut around the edge (a)
3. fold on the lines (b)
4. assemble : glue or staple the gray area (c) into the inside of the parallelepiped. Or better yet, tape the gray area onto the last color side (d) : this will reinforce the pawn.
