

Rectangular pawns with top to print and assemble

These free pawns are easy to build for your board games. Print and build as many as you like on some strong paper. You cannot store these flat like the simple rectangular pawns.

1. print
2. cut around the edge (a)
3. fold on the lines (b)
4. assemble : glue or staple the gray area (c) into the inside of the parallelepiped. Or better yet, tape the gray area onto the last color side (d) : this will reinforce the pawn.
